## Please do not throw sausage pizza away osi

Installation of a work station > OSI Reference model This is not strictly part of an installation of workstations, but it is a good idea to understand what a network is set if you are going to deal with in any way. I'll start with a memory help I learned somewhere: Please don't throw sausage pizza away. It's not a bad idea if pizza doesn't get torn. But it is actually a help in remembering the reference model OSI used to design networks and programs that work on them. The OSI model provides seven layers where a network should work, and the memory help lists them from below. The first four layers manage how the data is grouped and transmitted. Physics This is the hardware level, where data exists as bits. Network cards such as electronics, cables and hubs are here. Data links Here the data is grouped first in bytes, and then in frames with the hardware address (MAC) of the network card from which the data comes. Switches and bridges, which are hub-like devices that keep the data from collision between them, work at this level. Network network Here the data is grouped in packages with addresses to which they go. The Internet protocol (IP) works at this level. routers, which filter packages and connect networks, are here. Transport This level deals with how computers configure connections between them, and grouping packages into segments to be sent from one computer to another. The Transport Control Protocol (TCP) works at this level. The last three layers deal with how data is used. These are generally treated by software. Session Here the data is grouped, with the data of each program kept separate from those of other programs. The SQL database query language is the best example of session-level programs. Presentation In this layer the data is formatted (RTF and XML for.JPG and PNG for images, MP3 and QuickTime per media), encrypted (PGP), compressed (PKWare and WinZip) and otherwise manipulated. Application At this highest level the userdata. Web browsers, email clients and FTP and electronic fund transfers are application layer software. A historical note: OSI had to be the interconnection standard for all networks. However, as the product of "a strongly politicized standard committee" with different countries following it from every way, it became bloated and complex and simply could not compete with TCP/IP, which won at the end. However, the model is still useful, so it is still with us. © 2004 by Andy West. Written on 19 February 2004. Updated on 4 September 2005. The book is here... and now on sale! The entire site in a document for easy reference! The TCP/IP Guide The TCP/IP 9 Guide The Open System Interconnection (OSI) Layer Application Reference Model (Layer 7) OSI Reference Model Summary OSI Model Reference Model Mnemonics If you spend a lot of time at all network design or implementation problems, or learn how the various protocols work, names and numbers of the various layers eventually will become "second nature". Trust me, I know from experience! Many people, however, especially those who simply learn on networks, find it difficult to remember the names of all layers, and above all, what their exact order is. To help these people, a series of mnemonics (pronounced "neh-MON-iks" – another wonder of the English language) were created as memory aid. These are nice phrases where each word begins with the first letter of an OSI model layer, organized in the correct order. Figure 18: Reference model OSI Mnemonics These mnemonics can help you remember the order of the OSI Reference Model layers. I have seen some of them in my time, some of which go in order number of growing layer, and some of which go in other direction. These two range from physical layer to application layer: ForDon't throw sausage pizza away please don't touch Steve's pet alligator And these go on the other sidea physique: All people seem to need data processing (this is a popular) All people standing Totally Naked Don't Perspire (hmm, this is interesting. For your convenience, I have illustrated all four of these in Figure 18. Oh, and here's one I just invented: All people should teach on the net every day please. (Well, I like it! J) Application level (level 7) Synthesis of reference model OSI If you find the TCP/ Guide Useful IP, please consider making a small Paypal donation to help the site, using one of the buttons below. You can also donate a custom amount using the right extreme button (no less than \$1 please, or PayPal gets most / all your money!) Instead of a larger donation, you can consider buying a TCP/IP download license. Thank you for your support!
